

Amendments to the Claims:

Listing of Claims - The following listing of claims is to replace all previous listing of claims.

1. 1. (Currently Amended) A method of utilizing a push model to provide access to a message list in one or more of a voice, a fax, an e-mail and a unified mailbox through a wireless network, the method comprising the steps of:
 - a. automatically receiving an updated mailbox content list from a server through a wireless network;
 - b. scrolling through the updated mailbox content list and selecting a message therefrom with a wireless device;
 - c. forming a communication link through the wireless network thereby linking the wireless device and the server;
 - d. selectively receiving a the message on the wireless device from the server over the communication link; and
 - e. providing the message to a user.
2. 2. (Original) The method of Claim 1 further comprising a new message notification, including the updated content list.
3. 3. (Original) The method of Claim 1 wherein the wireless network has a low data-bandwidth and a high data-latency.
4. 4. (Original) The method of Claim 1 further comprising the step of the user scrolling through the updated mailbox content list without accessing the wireless network.
5. 5. (Currently Amended) The method of Claim 1 further comprising the step of the user issuing the a command using the wireless device.
6. 6. (Original) The method of Claim 1 further comprising the step of the server playing the message according to a command given by the user.

- 1 7. (Currently Amended) A system for providing access to a message list in one or more of a
2 voice, a fax, an e-mail and a unified mailbox through a wireless network comprising:
3 a. a wireless device;
4 b. a server; and
5 c. a wireless network linking the wireless device with the server such that in
6 operation an updated mailbox content list is automatically sent over the wireless
7 network from the server to the wireless device and after being sent by the server a
8 message from the updated mailbox content list received by the wireless device is
9 selected using the wireless device thereby forming a communication link between
10 the wireless device and the server over the wireless network, and the selected
11 message is sent to the wireless device over the communication link.
- 1 8. (Original) The system of Claim 7 wherein the wireless network has a low data
2 bandwidth and a high data latency.
- 1 9. (Currently Amended) The system of Claim 7 wherein a new message notification and an
2 the updated mailbox content list includes a new message notification are sent over the
3 wireless network from the server to the wireless device.
- 1 10. (Currently Amended) The system of Claim 7 9 wherein after being sent by the server, the
2 new message notification and the updated content list can be viewed by a user with the
3 wireless device.
- 1 11. (Currently Amended) The system of Claim 7 10 wherein the user may scroll through the
2 updated mailbox content list with the wireless device.
- 1 12. (Currently Amended) The system of Claim 7 wherein the a user selects a the message by
2 issuing a command to the server.
- 1 13. (Currently Amended) The system of Claim 7 12 wherein the server delivers the message
2 selected by the user and the message is played for the user by the wireless device.

1 14. (Currently Amended) A method of providing access to a message list in one or more of a
2 voice, a fax, an e-mail or a unified mailbox through a wireless network, the method
3 comprising the steps of:

- 4 a. automatically receiving through a wireless network a new message notification
5 and an updated mailbox content list from a server;
- 6 b. remotely scrolling through the updated mailbox content list and selecting a
7 message therefrom using a wireless device;
- 8 c. forming a communication link between the wireless device and the server; and
- 9 d. receiving and presenting a the message on the wireless device from the server
10 over the communication link and presenting the message.

1 15. (Original) The method of Claim 14 wherein the wireless network has a low data-
2 bandwidth and a high data-latency.

1 16. (Original) The method of Claim 14 further comprising the step of a user scrolling
2 through the updated mailbox content list without accessing the data network.

1 17. (Currently Amended) The method of Claim 14 further comprising the step of the a user
2 issuing the a command using the wireless device.

1 18. (Original) The method of Claim 14 further comprising the step of the server playing
2 the message according to a command given by the user.

1 19. (Currently Amended) A system for providing access to a message list in one or more of a
2 voice, a fax or a unified mailbox through a wireless network, the system comprising:

- 3 a. means for automatically receiving an updated mailbox content list from a server
4 through a wireless network;
- 5 b. means for scrolling through the updated mailbox content list and selecting a
6 message therefrom with a wireless device;
- 7 c. means for forming a communication link through the wireless network thereby
8 linking the wireless device and the server;
- 9 d. means for selectively receiving a the message, the message received on the
10 wireless device from the server over the communication link; and

- 11 d. means for providing the message to a user.
- 1 20. (Original) The system of Claim 19 wherein a new message notification includes the
2 updated mailbox content list.
- 1 21. (Original) The system of Claim 19 wherein the wireless network has a low
2 bandwidth and a high latency.
- 1 22. (Original) The system of Claim 19 wherein the user scrolls through the updated
2 mailbox content list without accessing the wireless network.
- 1 23. (Original) The system of Claim 19 wherein the user issues a command using the
2 wireless device.
- 1 24. (Currently Amended) The system of Claim 19 wherein the server plays the message
2 according to ~~the~~ a command given by the user.
